

CUSTOM MIXING SYSTEMS

Damon offers a variety of mixing stations engineered to meet the needs of our customers. Your Damon representative will help you assess your needs and design a system for you. Some of the most popular systems are shown on this page.

MaxiMizer™ System

The single product mixing center encloses a single gallon container of chemical concentrate and accurately dispenses pre-measured cleaning solution. The modular configuration allows the units to be ganged together for 2, 3 or 4 product proportioning. The unit mounts on the wall to preserve valuable floor space. At the press of a button you can fill either quart bottles at a 1 g.p.m. fill rate or buckets and autoscrubbers at 4 g.p.m. through the hose. The locking cabinet prevents pilferage

or tampering with chemical mix ratios.

ACCUDOSE™ NEW E-Gap Backflow Preventors don't splash water.

- Prevents waste.
- Avoids contamination.
- Eliminates handling of concentrates.
- Saves space.
- Non-Electric.
- Versatile.

Accudose is a convenient 1, 2, or 3 button mix / fill wall mount station for precisely metering chemicals from their original container. Color coded metering tips determine dilution ratios. Made of corrosion resistant components for temperatures up to 180* F. Includes siphon breakers, foot valves and lines. Available in 4 G.P.M. (bucket fill rate) and 1 G.P.M. (bottle fill rate) styles. Some models have color coded buttons. The Select Four dispenser (upper right in photo) allows selection from four products and has both 1 and 4 G.P.M. fill rates.
